SRUJAN SURAPANENI
Senior Consultant / Team Lead – Data & Analytics

As a senior consultant and technical lead at CGI, I help clients find the subject and medium that best fits their unique identity, and then I produce high-quality content that meets their objectives.

I have over **9 years** of experience working in data analytics & data science and engineering as an applications developer and dev lead. Currently, I consult as a senior applications developer and development lead at a major health insurance company, where I collaborate with various business and technical teams to deliver the project within the time and scope defined. On a daily basis, I work on improving products and services for our customers by using advanced analytics, standing up big-data analytical tools, creating and maintaining models, and onboarding compelling new data sets. As a part of my delivery, I also work with the clients to improve their delivery pipelines by developing POCs to make applications CICD compliant that ensures consistent and continuous delivery.
